If you try to complete the input with selected characters, press Button 1 + 2 at the same time and hold to complete the setup.

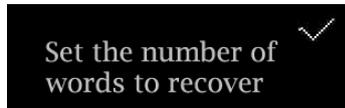

Please record the passphrase Word list shown on the screen in the enclosed sheet.

Create Word list

- Press Button 2

- Press Button 2

You can choose from 3 to 24 words.

- Press Button 1 to change word count.

Press Button 2 to select number of words that you want. .

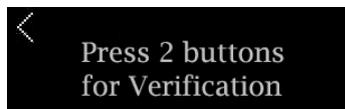

We recommend you to choose a higher number for better security.

Selected numbers of random words will be displayed.

- Press the Buttons 1 + 2 to move to the left or right to check the words. Please record the words displayed on the enclosed recording sheet in the order of display.

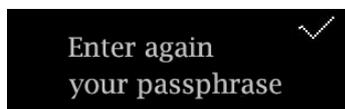

Please keep the Word list with passphrase. You cannot restore wallet if you lose it.

Press Button 2 to move to the final step to confirm the entered Word list and Passphrase again.

- Press Button 1 + 2 at the same time.

Passphrase input value verification step

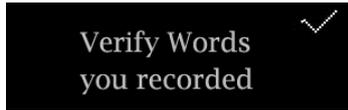

- Enter the passphrase with "Passphrase input step".

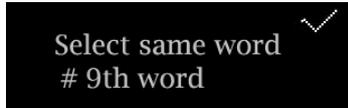

If it matches the previously entered value, it goes to the Word list confirmation step.

If your passphrase input is canceled in the wallet create step, you will be moved directly to the Word list confirmation step.

Word list confirmation step

- Randomly select 3 words from the Word lists and select those words in the order that match with the previously recorded words.

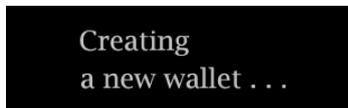

- When you press Button 2, words are displayed in random order. Check the words on the screen in the sequence shown on the display.

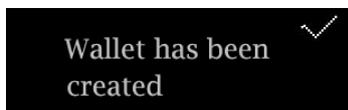

- Find the word that matches the order and press Button 1 + 2 at the same time. Select three words in the same way.

- Press Button 2 to start creating a new wallet. If you want to cancel the creating wallet, please disconnect the USB connection. If you do not proceed to the next step, your wallet will not be created

- It takes about 4-5 seconds to newly create wallet. If the power is cut-off during this process or the wallet is not created normally, you can either restart creating wallet from the beginning or recover your wallet through the recorded recovery texts.

- The wallet has been successfully created. You will be able to use your device normally after you press Button 2,

Wallet recovery

Wallet recovery is the process of restoring your wallet with the Word list that you choose when you create a new wallet. The process is similar to create a new wallet, but the Words in the word list must be typed in order to restore the wallet. If you have created a wallet with additional passphrase, you must also restore the same passphrase to recover the wallet with the same information.

How to create a secure wallet

After creating a new wallet, select "Factory Reset" and then "Repair Wallet". It is recommended that you select "Restore Wallet" from the "Wallet Settings" menu. This is the simplest but most reliable method of self-diagnosing the validity of the Word list and passphrase you wrote down when you create a new wallet.

< How to use Recovery Card >

When you create a new wallet, you must record your passphrase and Word list in order. If you lose your device, factory reset, or re-create a new wallet, your Wallet information will be available only through recovery. In this case, you can recover the same wallet using the passphrase and Word list recorded on the recovery card. Cards with recovery statements must be kept in a safe place to ensure they are not lost. You cannot recover your wallet if you lose it.

< General Operation Description >

Create wallet

The words and passphrase that appear while creating your wallet must be recorded on the enclosed sheet. It is possible to recover by using the recorded word and passphrase when lost or initialized. If the recorded contents are lost, it cannot be recovered.

The number of recovery words can be from 3 to 24.

If you want high security, we recommend choosing many words.

The passphrase is optional and will be entered by the user only when the input is selected.

There is a procedure to reconfirm what was entered in the final step to prevent a random wallet creating.

Be sure to record your Word list and passphrase so that they are not lost. The order of the words is important, so they must be recorded exactly in the order in which they appear.

"It cannot be recovered when lost."

Wallet recovery

You can recover your existed wallet when you use a new device or when the device is reset.

In the recovery phase, you can recover your wallet by entering the Word list and passphrase that you recorded during the wallet create process.

If you did not add a passphrase when you created your wallet, please cancel the passphrase entry process and proceed with the restoration only by entering the word.

You must enter the same information while you used to create your wallet to recover the same wallet.

If you enter only 3 alphabetic characters, you can see the list of words that can be selected.

Error occurred during information input

If your wallet did not actually enter the "in progress" or "completed" state, remove USB from your device so you can re-start "Create a new wallet" or "recovery" process by reconnecting USB.

PIN Number

To use the booting device, you need to enter the PIN number.

You can set your own numbers that has 4 to 10 digits.

If you enter the wrong PIN number ten times in the initial booting sequence, all the wallet information of the device will be initialized. This is to prevent entering the wrong information in case of someone try to manipulate the product.

When the device is initialized due to a 10-time PIN failure, the generated wallet will also be deleted, so you must regenerate it through "Repair Wallet".

Word list and Passphrase

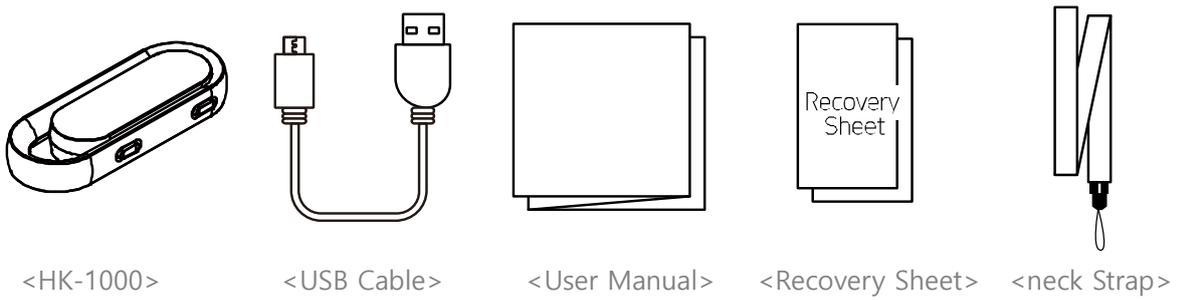

A set of personal passphrases will be used when creating an encrypted key for wallet create. You can use the Word list alone or you can add an additional passphrase to your Word list that corresponds to your personal password. Since the information entered is not stored in the product's memory, it must be stored on the enclosed record sheet or other paper. It is mandatory to recover your wallet and **cannot be recovered if lost**. If you record the words that are displayed on your device in order, and you have entered additional passphrases, please record them together and keep them in a safe place.

Passphrase is optional. If you canceled the input the passphrase when you create a new wallet, then the wallet would be created with the Word list only, so only the Word list would be required when restoring the wallet.
